**Business & Industrial Property - Schedule Value Calculation Guidelines  
Tax Year 2025**

Asset Category	Schedule
A. <b>Inventories</b> - Includes finished goods, supplies, raw materials, work in process	100% Original Cost. Note: Consumer Price Index (CPI) = 2.0%
B. <b>Furniture &amp; Fixtures</b>	8-Year Age/Life Original Cost x Index Factor x %GD Schedule
C. <b>Machinery &amp; Equipment</b>	Original Cost x Index Factor x %GD Schedule
1. <b>General Office Equipment</b> .....	6-Year Age/Life
2. <b>Specific Equipment</b> .....	Specific Equipment Age/Life
	<b>Includes:      Mobile Radio Equipment                      Cellular Telephones                          Telephone Systems                                      Fax Machines</b>
3. <b>All other Machinery &amp; Equipment</b> .....	Age Life Schedule Based on the Type of M&E: (Refer to SIC Code List)
	<b>Includes:      ATV, ATM, MRI, Ultrasound, CT Scanners, Hemodialysis machine                          and X-ray imaging equipment may have a 6-Year Life.</b>
D. <b>Computer Equipment</b>	Original Cost x %GD Schedule
1. PC Computer Equipment.....	PC Schedule (Servers - calculated using telecommunication equipment life)
	<b>Includes:      Input Devices                      Output Devices                          mouse                                      monitor                          keyboard                                      printer</b>
2. Mainframe .....	Mainframe Schedule
	<b>Includes:      IBM zSeries                                      System z10                          Z13s    High speed production printers                          System z9                                      Point of Sale (POS) registers</b>
E. <b>Telecommunication Equipment</b>	Original Cost x %GD Schedule (Industrial & General) Age Life Schedule Based on the Type of Telecommunication Equipment (Refer to SIC Code List)
	<b>Note:      The depreciation age/life is dependent upon the type of electronic                          equipment/component.</b>
F. <b>Solar Energy Device</b>	10-Year Age/Life Original Cost x Index Factor x %GD Schedule
G. <b>Leasehold Improvements</b>	6-Year Age/Life Original Cost x Index Factor x %GD Schedule
H. <b>Transportation Items</b>	
1. Vehicles.....	Info Nation, Inc. 6-Year Age/Life Original Cost x %GD Schedule
	<b>Note:      Vehicles are carried on a unique account.                          (Mounted equipment carried on the asset account.)</b>
2. Aircraft.....	<b>Aircraft Blue Book</b> - Business Aircraft Winter Edition <b>AVITAS</b> - Commercial Aircraft - Winter Edition
3. Vessels.....	20-Year Age/Life Original Cost x Index Factor x %GD Schedule
I. <b>Miscellaneous Assets</b>	Original Cost x Index Factor x %GD Schedule Age/Life Schedule Based on the Type of asset: (Refer to table of contents and SIC Code List)

**J. Cost Index Source**

The equipment cost index national average is obtained from Marshall Valuation Services as published in their October issue each year. The reported cost is indexed to arrive at the replacement cost new multiplied by the percent good factor (%GD). The Present Value Factors (PVF) includes the cost indexed which is used to calculate the Book Value to Market Value Conversion method.

**K. Useful Life**

These value calculation guidelines normally apply to items appraised by the Personal Property Section. Appraisers may apply an obsolescence factor to newer assets if the overall asset age mix is out of balance. These schedules may also be used for the appraisal of industrial personal property. However, industrial properties may be subject to different maintenance regimens and may have longer useful lives. A combination of longer schedules and factors representing condition may be used for such property. In any event, these schedules are guidelines and may be overridden based on the documentation presented and the judgment of the appraiser.

## METHODOLOGY

### YEAR OF ACQUISITION

The percent good factor (%GD) schedules for the YEAR OF ACQUISITION METHOD are to be used when original cost is known by year of acquisition. Refer to the property category, such as Furniture & Fixtures, to determine the appropriate useful life %GD schedule. The original cost is multiplied by the Index Factor, which equals the replacement cost; then multiply by the %GD for the

### BOOK VALUE TO MARKET VALUE CONVERSION

If the original cost by year of acquisition is not known, but the original cost and depreciation are known by category, the tables for BOOK VALUE / MARKET VALUE CONVERSION are to be used. First, divide the accumulated depreciation by the original cost to determine the percentage of book depreciation. The percentage of book depreciation is used to determine which present value factor (PVF) to apply. The original cost is multiplied by the PVF factor to arrive at a calculated rendered value for that category.

### NET BOOK VALUE

Original cost less accumulated depreciation equals NET BOOK VALUE. The net book value is calculated and compared to the BOOK VALUE / MARKET VALUE CONVERSION METHOD of valuation. If the net book value is greater than the book value / market value method, then the net book value is used to arrive at a calculated rendered value for that category. The NET BOOK VALUE is *not* used to override the YEAR OF ACQUISITION METHOD of valuation.

#### Additional addendum

#### **LEGEND KEY FOR GROUP CODES**

*MAN - Manual Group*

*MOD - Model Group*

*IND - Industrial Group*

*NEC – Not Elsewhere Classified*

#### **Note:**

The Default year life for Miscellaneous (MISC) and Machinery & Equipment (M&E) by SIC is a guideline for assets typical of businesses within the SIC. In some cases, specific assets may have a shorter or longer year life than what is typical for the asset category. The default year life is not intended to limit the age-life classification in these categories or the judgment of the appraiser.

**Note 1:**  
Schedules for items with 15 year or greater lives normally apply only to certain types of industrial machinery and equipment. Generally, items of this type are maintained in a manner resulting in low effective ages. Industrial appraisers adjust for lesser degrees of maintenance through application of service factors.

**Note 2:**  
The default year life for MISC or M&E by SIC is a guideline for the assets typical of businesses within the SIC. In some cases, specific assets may have a shorter or longer year life than what is typical for the asset category. The default year life is not intended to limit the age-life classification in these categories or the judgment of the appraiser.
